

Visited the Fieldhouse  
on Friday the 8<sup>th</sup> of July  
1816. Boarding the  
same evening at 6<sup>th</sup>  
Horticultural St. at 5<sup>th</sup> street.  
1<sup>st</sup> Lecture by  
Prof. Brewster at 11 o'clock  
Professor of Mathematics  
and Dr. Thorpe  
to 8<sup>th</sup> Line at 12 o'clock  
Chemistry  
Prof. Baudin <sup>10</sup> <sup>11</sup> <sup>12</sup> <sup>13</sup> <sup>14</sup> <sup>15</sup> <sup>16</sup> <sup>17</sup> <sup>18</sup> <sup>19</sup> <sup>20</sup> <sup>21</sup> <sup>22</sup> # Notes on materia medica

The substances which effect the system, are by Dr. Parry divided into two classes -

1 Nutritia, 2 Materia Medica

Nutritia may again be divided into three classes -

1 Alimenta, 2 Pulchritudine, 3 Conducia

Materia Medica, is likewise divided into two general classes.

1 Evacuantia, 2 Simulativa.

The first of these is divided into six classes, which are as follows,

1 Blood letting, 2 Cathartics,  
3 Emetics, 4 Pneumatics,  
5 Purging, 6 Emmenagogues.

The second is divided into  
five classes - as follow,

- 1 Incretants,
- 2 Tonics,
- 3 Astringents
- 4 Narcotics,
- 5 Stimulants;

 water then add the other  
 articles. The dose is 2 tea  
 spoonfuls twice or thrice a  
 day.

th Philadelphia

Phila~~delphia~~  
7 Jan. 1817

23

J. Chapman, believing the in-  
adequacy of any nosological  
arrangement on the ~~line~~ ~~of disease~~  
disease, & got, and the complex  
etc, together with the obvious errors  
contained in it, now already extant,  
proposes the division of the animal  
system, into certain Classe, or parts,  
and to treat of the disease, with  
their cure, to which those parts  
are subject or liable. —

The first division is, as follows,

1 Circulatory; blood

2 Alimentary; Stomach, intestines, &c.

3 Respiratory - Lungs -  
4 Absorbent, Lachrym., Epiphysial  
5 Secretory, Glands, in  
6 Sensative, Brain, nerves, Muculae,  
7 Muscular, commonly called Musc.  
8 Cutaneous, Skin in  
9 Osseous. Bones in <sup>parts.</sup>  
10 Genital organs, Ovaria

Circulatory System, incident

1. Feverish In <sup>1</sup> Intermittent, <sup>2</sup> Unintermittent, <sup>3</sup> Continued

I for the cure of, I a  
- Intermittent Fever. Take of  
Per. Bark in 3 ss <sup>small cuts</sup> 4 pouders  
Sesum Virginiana in 13 <sup>and give</sup> 1  
Carbonas Soda in 3 ss <sup>4 times a day</sup>

An other for an adult

Opium alone, or combined  
with Spsas. or Tartar Emulc.  
Say. Opium alone in 2 grs  
or with Spsas in 2" 1 Pouc  
or Tart. Emulc in 1/6"

When P. Bark &c disagrees with  
the Stomach, combine aromatics

Say - P. Bark in 13  
Cloves in 15 grs  
or Ginger in 4"  
St. Cayenne Pepper in 4" Pow. dose  
or Peruvian, Virginiana 10 to 15 grs

If this produces purging in either  
of the above named ways of adminis-  
tering - combine 5 or 6 cloves of  
Laudanum, if on the Contrary it  
constipates, give an equal number  
of grains of Rhubarb 5 grs

Another Recipe

Spicer Webb  $\frac{1}{2}$  grs

Opium arabic in 2 "

give in all Flgs. of Intermittent.

Carbon or Charcoal finely pul  
= verined. Table spoonful to be  
in peated several times a day Don

Take of Th, Virginia Sarsapar,  
or Snak root in -  $\frac{1}{3}$   
or Dogwood in in  $\frac{1}{3}$   
or Willow in  $\frac{1}{3}$   
or Lori, Juli, Amer. Poplar  $\frac{1}{3}$  for a  
dos - and mix them as P. Books

Opium Sinc in 2  $\frac{1}{3}$

Gentian in in  $\frac{1}{2}$   $\frac{3}{4}$

Opium in in 2 grs

Divide into 10 or 12 portions,  
give 1 every 15 hours.

Sulphur in - 13  
Spirits or Wine in - 2 lbs.

Take half an Ounce or a Table  
 Spoonful repeatedlly before the  
 accessions expected.

---

Arsenicum in - 15 gr  
 Ginger in - 2 gr  
 Give 4 or 5 times a day

Sulphate Copper. or Blue Vitriol 1 gr  
 P. Barts Dose in - 32 gr

Makre into 16 Pillula and  
 give 1 every 3 or 4 hours.

---

In the cold Stage of the Paroxysm Dr  
 Trotter gave 15 to 20 drops of  
 Laudanum, and Dr Chapman  
 recommends the same, from his  
 own observation, in affecting  
 many Cures.

External warmth, Hot herb teas,  
Wine Whey, Cournagout, and  
Emetics.

In the hot Stage,

Emetics, remove irritation, and Bleeding  
likewise have the same effect. -

2<sup>d</sup> Indication promote perspiration  
Ipecac, powder, in doses of 10 or 12  
Emetics, Spiritus Mildereri in  
doses of half an ounce or a Table  
spoonful. Bleeding, purging,  
Calomel, Blistering, Spurts of  
Water dulcified. -

2<sup>d</sup> Remittent Fever requires  
the treatment adopted in the  
Intermittent, varied by  
the Physician, Skille direct,  
or proponata.

rrrrrrrrrr

3<sup>rd</sup> Continued Fever is divided  
into Typhocha and Typhus.  
The most usual form of Typho-  
cha is the inflammatory/  
bilious Fever. The Intermittent,  
Recurrent, and Continued  
Fever are the same differing  
only in degree. — — —

### Cure of Continued Fever,

#### 1 Inflammatory Bilious.

1 Operation, which is indicated  
by a high full pulse, hot skin,  
with other symptoms of acute  
inflammation, diathesis. —

2 Emetics, R || 2<sup>nd</sup> Jar. Emetics com-  
bined with 20" of Specumena.

3 Purges - Mercury and Salap,  
or Rhubarb. After the op-  
eration of purges, a Saline

drink may be used, composed  
of Sulphate Soda m 13  
" Tart Emetic m 1<sup>r</sup>  
" Lemon juice or vinegar m 13  
" Water m m m  $\frac{3}{4}$  dose  
a Table spoonful every hour or  
two, Pro re natae. In case purges  
do not have the wished for effect, an  
enema, composed of

Common Salt m m 3 p  
Honey, or castor oil, orard 3 p  
Water m m m 1 lb of fruit  
must be had recourse to.—

So creating Medicines are  
very efficacious, but require much  
medical skill in their adjuvantia-  
tions. — The Stomach is frequently  
so irritable, that it can not bear  
Antimony in any quantity, and  
when this is the case the

Following is a good receipt

31

When this is the case, the  
following is a good receipt, &c.

Lime juice or Vinegar in an  $\frac{2}{3}$

Saturate with Potash in

Loaf Sugar, make it a gruel

Water in in in in  $\frac{2}{3}$

take half an ounce every hour  
or two as the case may demand.

Hot baths, such as Brick &c  
are often attended with much  
advantage, in procuring a  
sweat. When this remedy  
fails, a Teaspoonful of Sunda-  
num may be injected.

If you are unsuccessful yet ap-  
ply Catalepsy, which will  
be succeeded by Blisters of  
cayenne. Never, in any case  
of inflammatory disease. Com-  
plaints, are stimulating & re-  
dorfeed to be used.

Refrigerants are beneficial, and particularly the common Nitre or Salt Petre, combined as follows

Nitro-aqua m m m 13

Calomel m m m 12 gms

Tartar Emetic same 1 g.

make 8 doses and give every hour, two, or three. If purging is induced and not wished, leave out the Calomel, and if vomiting, the Tartar Emetic.

2 Cold water has been recommended by some Physicians, but the points still remain contested.

D. Chapman is in favor of it, where the system is marked with high pulse, hot skin &c, but positively denies any advantages

arising from the treatment in debilitated, emaciated systems.

Cold water given in small

quantity, acidulated, with

33

Quantity, accidetally, with  
vinegar, lime juice, Tannin, or  
apple, or toasted bread is evident-  
ly attested by good effect.

The above is very proper, when  
there exists excessive thirst, clammy  
Fancy and Pharynx.

When the Fever cannot be  
checked with the ordinary treat-  
ment, it becomes necessary to  
resort to Mercury, Letting can  
at the same time, be used to  
vacuate the system previous to its use.

Blisters are likewise recommended  
by some authors, but their effects  
are not satisfactorily ascertained.  
Dr George Hodges is decidedly  
in opposition to them, while Dr.  
Chapman thinks them to  
possess great virtue, when in  
skillful hands.

2. Typhus Fever. This has likewise been divided into Typhus, Gonorrhoea and Malaria, but Chaseman does not appear to any division, and consequently includes both under Typhus Fever. -

The cause of Typhus, according to some writers, is contagion. Dr. Chaseman disagrees with this doctrine, and proves its absurdity, by its not being contagious, whilst the apartment of the patient is well ventilated.

The causes are great debility, exhaustion prostration of the system from violent exercise either of the body or mind. -

One of the first remedies in the cur. is Bleeding, but it does not follow as a consequence that it is necessary in all instances, but on the other hand, must always

35

or a remedy in all instances, but  
on the other hand, must always  
be indicated by the existence  
of symptoms, and the Physician's skill.

2. Cromic, Cullen and most  
of the Edinburgh Physicians  
were in the habit of giving  
Antimony in manufacturing doses.

Dr Chapman purges actively  
instead of administering opium.  
His purges consist of Calomel  
alone, or combined with Salap  
or Senna bark.

3. Cold application, and Cervi  
was among the first who recom-  
mended this practice with  
great confidence of its efficacy.

It may be employed in dif-  
ferent ways. 1. Immersion  
and 3. Spraying which method  
Chapman approves, and says  
the Temperature of the water ought  
to be reduced to 40 or 45° Fahr.

Dr Jackson was in the habit  
of giving Cordials or opium, in order  
to awaken the sensibility of the  
System and render it more fit for  
the exhibition of Cold.

Chapman never uses Cold application  
= eation, when the extremities are  
Cold, and an universal pallor  
prevades the whole skin; but on  
the contrary when the skin is  
hot, but not in a state of per-  
spiration or sweat.

If the progress of their fever is  
not arrested, by the remedies already  
mentioned, it has been, and is still  
the practice, to give diaforetics.  
They should be of the milder kind  
such as, the Salmi Soppy mixture  
Astringency is not admissible in this  
complaint. — Volatile Alkali,  
very useful in substance, but the  
Soppy is far preferable by Dr Chapman.

*It is made as follows*

37

Sol Ammoniac m	m	13
Gum Arabic m	m	23
Loaf Sugar m	m	13
Water m	m	4 1/3

*Give the ordinary dose  
but the Physician must be governed  
by the demands of the symptom.  
It in Whisky is efficacious and  
is composed of common  
Whisky m m 2 parts  
Wine m m m 1 m*

*It should prove too strong  
dilute with water and if too  
weak add more wine.*

*Camphor has many virtues in  
this disease but Chapman prefers  
the Volatile Alkalies. The most ap-  
proved method of giving Camphor  
is the Salve made as follows*

Gum Myrrh in m.m. 13  
Loaf Sugar in m.m. 23  
Camphor in m.m. 1/20  
Water in m.m. m.m. 6 3

Table spoon full or 1/3

Sinapic acid used by many  
are chose but Chapman prefers  
Blisters, particularly in delirious  
Darwin does not exhibit them neither  
does Thomas, man of great sanctity  
Opium, its use is yet contested  
but Brown is a great advocate  
for it and Sir George Hodgson is  
decidedly against it. - Chapman  
thinks that opium possesses many  
unrivalled virtues, when given in  
small doses, as follows, growing  
2 or 3 hours previous.

Many of the Wines are ex-  
tremely officacious, blackbird &c.

A man involved in sickness etc.

39

It is an involutionary discharge of  
feces supradue opium cannot be  
exceeded. - The diffusible shrubs  
are often resorted to, and they  
possess great virtues in restoring  
a much debilitated system.

The P. Bark is thought by Dr.  
Chapman beneficial although  
he has many opponents. - He  
observed that they, (if ever frequently)  
manifested symptoms h. Intermittent  
or remit, and in such case the  
P. Bark is extremely useful  
When the Stomach will not bear  
it substitute bitters and aromatic  
drinks, one of the best of which is  
the Serpentina Virginiana.

Carbonic acid has been recommended,  
London Porter, taken in the dose  
of a Tablespoonful every 2 or 3 hours,

Sir George Hardy was first employed  
the acid, but Chapman does not  
use them while he has it in his power  
to procure the others already mentioned.

The Muriatic acid is thought the  
best, given in doses of from 10 to 12  
drops every 2 or 3 hours. — The

Catapeltic Alkali is given in doses  
of 10 grm every hour, while the  
patient is advised to use the Wines  
Copious exp. (Alladura). Pepper  
especially, Cayenne, is given in the  
quantity of 5 or 6 grm every hour or  
2 or 3 hours, in pills. — It has been used  
with considerable advantage as follows,

Pepper in in 1 Tablespoonful.  
Brandy in in 2 Tablespoonfuls  
rub the system well and good  
effect may result. — Can therefore  
be applied in spirit of Turpentine as follows  
Can Thareide in in 1/3  
Spirit Turpentine in 4 or 5 oz

dip rag in and apply to

dip rags in, and apply them  
as you would Blistering. The  
Antiphlogistic, as must all have  
likewise been used in the following recipe  
Mustard in in in  $\frac{9}{3}$   
Cumination in in in  $\frac{9}{3}$   
Frog Sanguineum in in 13  
Water in in in  $\frac{6}{3}$   
A Table spoonful every hour  
or two or Asafoetida combined  
with hot water, Chapman goes to with  
Gum Alba in in in  $\frac{9}{3}$   
Hot water in in in  $\frac{1}{3}$

Don as usual; Tablets, poultice  
When the disease progresses so far as  
to ~~begin~~ destroy the susceptibility of  
the system particularly the ~~rectum~~  
~~intestines~~ inject wine, Lanolin wine.

The late Epidemic appeared  
in the State of New Jersey in 1806  
and in the City of Philadelphia  
in the close of the winter 1813,  
and the commencement of the winter,  
1814:—

This disease is a Proteus, about  
= owing in the first instance certain  
symptoms, succeeded immediately  
by a contrary and directly opposite  
= with appearance.— The system is  
soon prostrated, the skin is hot and  
dry, face pale and livid, and  
when further advanced, the eyes  
wild and glazy, great uneasiness,  
pulse full & quick and tremulous  
excruciating pains in the head  
occasionally delirium, stupor  
and lethargy.— Immediate  
death often closes the life of the  
patient with pains in the Stomach

back, head, particularly small

back, head, particularly small  
points, or yet unsettled but is apt to  
concentrate in the head, so as to de-  
stroy vision; coma and paroxysms  
superior, extreme languor, mind  
much agitated, and repeatedly  
paints the most frightful phan-  
toms of the most hideous animal,  
and appears to employ itself in  
conjuring hallucination. — It  
sometimes presented itself in the  
form of Pneumonia, beginning  
with Chilly and Fever, coughing  
in the lungs known from the  
patient, coughing up Blood.  
It is not unlike the inflammatory  
bilious fever, and unless the Phy-  
sician were accustomed to its  
variety of appearance, would  
often be disappointed in the cure  
by treating it as an inflammatory  
Case in SSSSSSS

The patient are covered with Petechiae  
vibies & like the Spotted Fever.  
Dr. Chapman observed that the cases  
he saw at Alexandria were of  
this class and that it is the most  
formida ble, when attended with  
an enlargement of the Spleen  
not the Liver. This disease cannot  
be called a Fever according to  
all nosologists, Chapman. There  
are extravasations into the cavity  
and dissection has often found  
a dark crimson quantity of  
blood in the Brain. - Chapman  
believes it to be a syphus action  
modified greatly by the preexisting  
accompaniment the disease.

The origin of this formidable  
complaint is yet undetermined in ob-  
- servability. Dr. Chapman, is disposed  
to suppose its origin to a low

de gree of temperature, but many  
difficulties present themselves in ac-  
counting for it in this way and  
he finally confessed that he must  
resort to a depraved atmosphere  
for its existence. - Mode of  
Curing. Bleeding was used as a raw  
- edy, but was eventually abandoned  
by almost all the Physician, and  
the stimulative medicine adopted.  
Mode Stimuli, & Smearing and  
Chapman prefers the latter - toge-  
ther with the City Practitioners. -  
Dr Chapman exhibited the well  
Known Poover powder 10 or 15 <sup>gr</sup>  
every 3 or 4 hours. - Root fomentation  
to the extremities, and corn frits.  
Corn boiled is a good smearing  
article. - Chapman says that  
he never lost a patient when he  
produced smearing.

Volatile Alkali 10 grm every hour,  
or some can would not demand more  
than 5 grs. Cam. Thandy in Sptys  
of Turpentine. - Cayenne pepper  
in Brandy. Emetics are beneficial  
and ought to be followed by purges  
Calomel combined with Spices. -  
Lancet never was called for in Chap  
many practice, although he  
thinks other Climate would  
demand its use. The death of  
the patient is characterized by  
an leaden colour in the face, or a  
Copper coloured hue. There are  
undebatable and invariable symp-  
toms of a ~~pro~~active disposition.

47

## The Yellow Fever - Icteroder

Chapman, refers to Rush's work,  
as they contain all the informa-  
tions that he (Chapman) conciev-  
es himself capable of giving. Not  
known in the West Indies, but  
has, occasionally, visited the U.S. State,  
from the time of their Colonization.  
The year 1793 is particularly  
marked with its ravages. To detail  
the contrary of opinion, as it re-  
-spects the origin of this disease  
would consume too much time,  
and observe, that, before, from  
tropical climates, most frequent  
by an account framed with it. —

Chapman says, all contagious com-  
-plaints are owing to a scorbutic ac-  
-tion. — An other differ, as to the  
nature of it, whether or not it is a  
disease of the typhoid or inflam-  
ma-tive action.

Chapman asserts positively, that it ap-  
peared as an inflammatory complaint  
and was cured by depleting medicine  
in this city. - Dr. Rush thought  
that it was an aggravated case  
of our inflammatory bilious fever.

D. Physic reports, that from  
numerous dissections he is authorized  
to say that the Stomach is its seat,  
and that the Liver, with the Brown,  
were characterized by healthy and  
their natural appearance. - The con-  
tent of this organ, the Stomach, was  
solid matter secreted by it, and  
not a vitiated condition of the  
Bile. -

The Cure consists of Bleeding,  
purgings, &c. The best purge  
is Calomel, Chapman. - He has  
a numerous band of opponents,  
in the art of Mercury, although

it has many more advocates at this

49

it has many more advocates at this time than heretofore - one of the greatest difficulties in the exhibition of Cataplasm, is, that the progress of the Fever is so rapid that no - for salivation can be induced the patient's career is finished and a termination is put to his life. - The following question was asked Dr. Physic, by Dr. Chapman, What does yellow Fever resemble? Answer) That disease is cured by swallowing Arsenic or any other poisonous substance. - Dr. Jackson believed it to be highly inflammatory and bled from 80 to 100 Zollers, Chapman does not recommend this treatment in so rash a manner, nevertheless, he uses the Lancet when the symptoms indicate Typhus. The Practitioners must not be governed by the prudent good by Dr. Rush.

Calomel is less irritating than the  
milder laxative, and is to be given  
in doses of from 10 to 15 grain, every  
2 or 3 hours; gentle evacuation, or  
effected. — Treatment. —

This is to succeed the more depleting  
remedies. — The diaphoretic, and  
Antimony do, not answer when  
the Stomach is irritable. —

Chapman gives Dover powder,  
Eupatorium, Spiritus medicinalis and  
the Saline mixture. Cold appli-  
cations were much resorted to in the West  
Indies. — Blister applied on the  
region of the Stomach, and other  
parts are often attended with  
violent success. They regulate the  
pulse, induce copious sleep, and  
restore the heating action. — In  
the first stage, the effervescent draught

Olive Tincture, given on the <sup>51</sup>

The first stage the effervescing draught

Olive Oil bathed in <sup>51</sup> given in the quantity of 10 or 15 drachms every half hour or more, protracted. When delirium subsides, Cupping, Beeches, cold application to the head and finally the opening of the Temporal artery are necessary.

## The Plague.

This terrible disease is dependent, for its origin, on the causes producing other febrile decompositions. - It originates from identity of cause with the Yellow Fever. - It is the consequence of the transmission of Egypt by the Nubis, that it prevails more generally there.

Cure. - It is customary to commence the cure of this disease

with 16 mitics, as it appears to affect the Biliary system more particularly. - 2<sup>d</sup> goldenbalm, Russell, and many others, had copious Chafing profusion to prochorical medium. - 3<sup>d</sup> Sweating. Mild diaphoretic, are unsafe and must be applied externally. - 4 Cold application. - Many instances are extant, to prove the efficacy of this remedy, that is, cold bathing. - 5 Friction with olive oil worn and by Baldwin, and Jackson, but without any evident advantages. - 6 Blister. 7 Volatile alkali. 8 Camphor. 9 Mercury. It is often impossible to salivate the patient before a termination is put to his ague, which renders the exhibition of the last named article very doubtful. It is contagious, which is evinced by rubbing the pestilential 10 - 11 when an ulcerated part

by rubbing the pustulent

matter upon an abraded sur-  
face. If Variolous, and a  
portion of Pustulent matter be  
triturated together, the disease is  
brought on but it comes mild  
and the injury done to the system  
will be very superficial. —

Having completed what I pro-  
posed for the disease, with their  
Cures, of the first subdivision,  
of the System, to wit, the Circu-  
latory, I now proceed to the  
Second which is the Alimentary.  
This includes, the Stomach and  
intestinal Canal, the first  
of which is more indispensably  
necessary in the constitution of  
life than any other part. —

There are instances to prove this  
assertion, in those persons born <sup>alive</sup> without  
out a head, Brain &c. —

# Gastritis.

This disease is marked with from  
-invent symptoms such as, acute  
pain in the precordia, great  
instability, tension in the Epiga-  
-stic region, pulse hard, and  
contracted; great prostration of  
strength, hiccup, matter discharg-  
-ed similar to that emitted in  
the Yellow Fever blacks. - Great  
pain is experienced often in the  
large toe, and groin, loss of all  
- voluntary motion, an aversion to  
water, and light, &c. - Dr. Phip-  
-psie says that excruciating torment is  
felt in the Labia pudendi of  
females, which is a circumstance  
not generally known among  
practitioners. -

Cure. This complaint calls

55

for 1 Veneration, regardless of  
the pulse, to the amount of  
10 to 20 ounces, and repeat as of  
often as the case may require, which  
is every 6 or 8 hours, pro re nata.  
Much fever does not attend this  
disease.—In almost all cases  
internal remedies can not be  
used, but when the case will  
admit such treatment Chapman  
gives 2 purges, and then consist  
of Calomel or, he believes, it less  
irritating than the mildest pur-  
ges of any other article, 3 times  
compound of:

Warm water	—	1/2 pint
Olive oil	—	— 1 3/4 or more
every 2 or 3 hours.—In cholera		
morbus the Epsom salt, Sulphate		
of Magnesia, is a specific Chapman		

It is in practice with many  
an error to cure delirious insanity,  
but Chapman does not agree with this. — He prefers Lime  
water and milk, and Bread  
toasted. — After depleting the  
patient, 5 warm Baths. — It is  
better, but above all remedies, the  
Lancet is superior.

Inflammation of the Stomach  
from Poisons or An arrow.  
All poisons in small doses are  
medicines, and all medicines in  
large doses are poisons. — Opium  
when taken either accidentally, or  
designedly, with the view of committing  
homicide, produces stupor, delirium,  
insensibility, and eventually death.  
Its effects, in such cases, are best coun-  
— tracted, by a vomit, which  
Dr Chapman observes should consist

57

Dr Chapman observes should consist  
of Tartar Emetic mnn 10 grs  
Ipecacuanha m - 30 grs. It is  
not uncommon to administer the  
Sulphate of Zinc, white vitriol, in  
doses of 20 grs to 13 and repeat  
it necessary. - Cataplasms applied  
to the region of the Stomach have  
been proved efficacious. - Tobaccos  
leaves, steeped in vinegar or other  
recommended with benefits. - One  
= mechanical lotions of the Stomach  
with an instrument for the purpose.  
Dr Chapman does not advise the at-  
tempts usually resorted to for rousing  
the patient, such as, tapping, shaking  
and compelling the patient to take  
exercise. - Palliatives, 1<sup>st</sup> the acid,  
2<sup>nd</sup> volatile alkali or Sulphur, in doses  
of a tablespoonfuls.

Opium has been a dangerous, but  
used in curing the evil effects, resulting  
from having swallowed an overdose  
of Digitalis purpurea. - Emetics,  
are indispensably necessary in both  
the mineral and vegetable poisons.

Corrosive Sublimate, is decomposed  
by the albumen of Eggs, given in large  
quantities. - Copper, is rendered  
insoluble by exhibiting Sugar, Molasses. -  
The deleterious effects of the nitrate  
of Tin, are destroyed by new milk.

The nitrate of Soda, counteracts the  
poisonous <sup>or injurious</sup> quality of the Nitrate of  
Silver. - The bad effects, occasioned  
by the preparation of Lead, particularly  
the acetate, are surmounted and  
relieved by Sulphate of Soda, or Magnesia. - In cases where antimonials,

have been swallowed, the common  
tea, P. Bark, Gals, &c, are useful  
and efficient in correcting this per-  
nicious tendency. — The mineral  
acids are treated by the use of the  
~~Calcined magnesia~~  
~~Magnesia, manna, &c.~~

The vegetable acid, by acetic  
acid or strong vinegar etc are  
used as it has been discovered  
for arsenic. — A Gentleman whose  
name is Bertrand asserted that  
Carlow was a specific against it  
but on experiment it was found  
to be inefficient. — In such  
cases after evacuating the stomach  
effectually, demulcent drincks are  
to be taken copiously, such as Syrup  
arabis &c. Oil or any nutritious  
substance is never to be given in

Case when Arsenic has been swal-  
lowed. - Chapman advising the use  
of the Lancet, subsequent to the other  
depicting remedies, and after the  
more severe symptoms have sub-  
sided. - There are some poisonous,  
nitritaceous, cannot be vomited in  
consequence of their firm adhesion  
to the internal Coat of the Stomach.

Pepseria. Is known by nausea,  
vomiting, surermentation, constriction  
about the precordia, constipation, paleness,  
languor, digested spirits, uneasiness, loss  
of sleep and rest. - It is sometimes  
accompanied with pain in the head and  
Breast, as in Consumption, vision inter-  
rupted, blinding. - Anæsthetic symp-  
toms, vertigo, palpitation of the heart,  
not unlike anæsthesia in the Aorta.  
The appetite is not uniformly upbraided.  
Cause, unproper diet, and drinking.

Strong Coffee, Tea, vegetable matter,

Strong Coffee, Tea, vegetable matter,  
and acids, excluding the use of animal  
food. — Cure, Imitation form  
cures, and most of the Salines mixtures.  
Other causes not mentioned above, Indol-  
ent, and sedentary habit, intense study,  
exposure to cold, particularly injury. —  
1) Specie in test, as an emetic. 2) purge  
of the mildest substance, Chayenne  
pepper.

Black Sulphur of 2 metches  
and Calced Magnesia at 3 ss give  
a dose at bed time in wine water. —  
Oreta properata. — after purging  
Tonic, Conscood of Gentian and  
Spirits. — P. Bark in decoction or in  
fusion with some aromatic substance  
Mineral Tonic,

Carbonate of Iron in	10 gm
Ginger in	5 gm

3 or 4 times a day. —

Corn bin Rhubarb of equal parts  
following is an excellent combination of bitters,  
Sassafras Root 3 lbs Zeph  
Orange Peel, and Gentian 3 lbs digest  
in Proof Wine in the Sun, and give  
a wine glass repeatedly during the day.  
Sal Masticum in 1 lb  
Gymnarabium in 1/2 lb make  
into 30 pills and give 2 or 3 often  
in the day.

Cardialgia, Lime water and milk,  
Alkalies, and abortives. - Vegetable al  
= kali, or

Salt Tartar in 2 3  
Spit Lavender in 2 3  
Soap Sugar in 1 3  
Laudanum in 30 drops  
Water in 3 3 a  
tablespoonful when the disease is pain  
ful or recurs. - Vol, alkali, in pills,  
Julep, and in aqua ammonia done  
of the latter half a table spoonful.

Gastro-lymea. - This is to be treated with opium, Ether, &c. Blisters, are useful and often necessary. - A favorite prescription, with Chapman,  
 Hickory Ash  $\frac{1}{2}$  pound 1 quart  
 Common Soot  $\frac{1}{2}$  pound 1 tea cupful  
 Boiling water  $\frac{1}{2}$  pint 1 Gallon  
 give from  $\frac{1}{2}$  to 1 Wine glassful  
 4 or 5 times a day. —

Pyrosis. - This disease originates from a long use of salted animal food. Chapman thinks it owing to a disorderly excitatory action of the stomach.  
 Cur. 18 miles, &c. The rate  
 of age of 15 is much more prevalent in  
 the U.S. than, but not in this city. The  
 dose is from 10 to 15 gr. with Camphor  
 aromatic q.s. —

28<sup>th</sup> Jan. 1817

2 Intrahepatic diseases - and include,

1 Gastritis, respecting which I said  
something under the subject Gastritis.  
These complaints require a bold  
practitioner. Soluble constipation  
must be one of the first indications  
in effecting a cure. Dr. Chapman  
uses Calomel for this purpose, and  
if it does not operate as soon as the  
physician desires, exhibit Castor  
Oil. - Emollient injections are very  
useful and should be resorted to re-  
peatedly after the operations of other  
purging remedies. 2 The Peritonitis  
is subject to acute disease,  
which are attended with pain,  
great heat, thirst, dryness of the  
mouth and fauces, not unlike  
that in Typhus. (The pain may be  
local or general) The patient in

this disease more generally con-

this disease, more generally, confines himself on his back with his knees retracted or drawn up; pulse from 100 to 140 in a minute. — When the patient can extend his legg'd is a good symptom, and the danger less. — A black matter is frequently discharged from the mouth, similar to Coffee ground. — Cold sweat, and extreme listlessness, delirium, insensibility finally close the scene.

Dissolution, prove that the Peritonium is <sup>only</sup> involved, while all the coats of the intestines are in Extent;

There is an extraordinary phenomenon more attend this complaint to wit, no disposition to evacuate, and when evacuation is procured, the pain is not relieved or the excreting agony sustained.

The London Practitioners use opium  
but Chapman does not acquiesce into  
the practice. - Now Chapman com-  
mences the cure, by 1/3 bleeding copi-  
ously, say to 25 or 30 ℥, and repeat,  
according to the prevailing symptoms,  
without being governed by the pulse.  
2 Diaphoretic, and then externally  
applied, vapour bath is recom-  
mended by Chapman. - Internal  
sweats, are produced with the Dorey  
powder. - 3 Blister, do harm when ap-  
plied too soon, and should be pre-  
ceded by other depleting & producing.  
Some chd'ts will not admit the use  
of the Panat, except sparingly,  
and in such circumstances, certain  
remedies are our chief resort. - It  
has before been mentioned, that va-  
pour bath is the most beneficial.  
There yet remains to be spoken of

a disease denominated Chrotic.

a disease denominated Chronic  
<sup>67</sup>  
form of Peritoneal inflammation.

The usual symptoms are sores  
of the abdomen, tongue furrowed  
in the morning, great thirst, no heat  
apparently on the surface of the body.

The most intractable cases are  
those in which the chronic form  
is succeeded by the inflammatory  
action, and to procure a cure  
in this complaint demands the  
utmost skill, and unabating at-  
tention. — The cure is to be effected  
— by the remedy already men-  
tioned. — Recollect in all dis-  
eases of low action, and great pro-  
stration of strength, when blisters  
are requisite, apply them to the  
affected extremities, as those parts seem  
to possess more vitality, and susceptibility  
of being roused. —

3 Colic. This is known by extreme  
pain in the lower belly, contraction  
of the muscles, alternate griping &c.  
Chapman divides Colic into three Spe-  
cies, to wit, 1 Flatulent Colic, 2 Bilious  
Colic and 3 Colica pictorum, named  
from Picto, in France, or from  
Perturbation. - The first species is  
caused by the causes inducing  
it and from flatulence, Gastritis. -  
It proceeds from Cabbages and  
other indigestible Food, Cold, &c.  
Cure, 1 Warm water, Camomile Tea,  
subdue the pain by cordial draughts,  
and Anodynus, such as Ethes, Capu-  
scher, Laudanum, Oil of Cinnamon &c.  
When it originates from cold apply  
heated substances on the region of the  
Stomach, hot water, Sand, wheat, oat  
or Salt, all of which articles must be  
rained to a sufficient warmth.

& Salt, all of which article must be  
raised to a sufficient warmth.  
After the use of these remedies, purgatives,  
hereafter to be spoken of more particularly,  
 vomitting is frequently an attendant  
of this species, and Chapman has  
witnessed a case, when the ~~other~~ <sup>subsequent</sup>  
purgation was the consequence from eating  
indigestible diet. —

2 Pillows - is common in the U<sup>t</sup> States,  
and the <sup>sure</sup> characteristic symptom  
is a chill preceding the complaints.  
Cure 1 Bleeding, to the amount of  $20\frac{2}{3}$   
from an adult, & leading indica-  
tion is to open the bowels. — It  
might at first view seem proper to give  
Cathartics, but the irritability of the  
parts will not permit their admini-  
stration. — 3 Lime water and milk.  
The exhibition of Opium and Laud-  
anum are rejected by many

usually used in injections. & the  
warm bath is an excellent application.  
— 3 A strong decoction of Lemna  
given in doses of 1 pint are agreeable  
as an enema. — 4 For burns the in-  
jection is as follow. Take of  
Cherry Sweetened 1 Tablespoon  
White of Egg — — 4 or 5  
water mixed in in 1 pint.

Hold water has been applied with  
succ egg. — Rush: One pint of cold  
water overcomes the most obstinate  
constipation. — 8 Tobacco ought  
not to be employed without all  
others fail. When it does become an  
expurg, it may be given in 2 or 3  
1 decoction pint of water, and half  
the quantity injected. — 2 method  
of giving it is the vapour or smoke,

Dr Chapman has been placed

Dr Chapman has been pleased  
with the success he has met with  
in giving a Solution of Tar. Emetic,  
as follows.

Pastor Emeticum 20 <sup>ʒ</sup>  
Water ~~rum~~ <sup>rum</sup> 3 or 4 <sup>ʒ</sup>

give a <sup>ʒ</sup> dose until it operates  
from water. — <sup>ʒ</sup>

The most  
benign laxation is milk of Sul-  
phur, and must be had recourse  
when drastic fail. — Pastor oil  
and Epsom Salt. — A favorite  
prescription with Chapman.

Opium <sup>ʒ</sup> 3 <sup>ʒ</sup>

Calomel <sup>ʒ</sup> 10 or 15 <sup>ʒ</sup>

every 3 or 4 hours. — The opium has  
great influence in quieting the  
restless up of the bowels, and eases  
the irritability of the Stomach.

Blister are to be resorted to when

other medicines are ineffectual,-  
3 Specie. Cobea Pictorum, unusual  
and produced by acid drink'd.  
Cold food hard of digestion.

The ordinary Symptoms are, pain  
in the abdomen, thirst, sickness at  
the Stomach, pulse weak, quieted  
and chorded. - In the Billious, the  
contrary is marked by a full  
strong and hard pulse. - Pereirea is  
synonymous with the preceding  
Cure. - 1 Bleeding, a purging  
and above all Opium and calomel.  
4 Cold water, 5 Castor oil, 6 5 from  
Salt, 7 Gum Guaiacum, 8 Balsam,  
9 Alum 10 or 15 grs every 5 or 6  
hours, was in practice of Pereirea.  
10 Morby's solution, Alum and  
white vitriol, in equal quantities,

down a Tablespoonful every morning

done a Tablespoonful every morning  
to effect a permanent Cure.

Having finished the cures of the  
three preceding diseases, I will  
turn up my practice in a few  
words and a condensed style.

1 Bleeding - 2 Stimu and calomil  
3 Injections, 4 Blister on the  
Abdomen, and 5 slight saliva  
- tion if any symptoms of Paroxysms  
occur. — Armen Armenia Armenia

### Cholera ~~I fear tame~~ Worked

This complaint prevails in all  
seasons, ~~but~~ more particularly  
in the winters. It originates from  
identity of cause, that other dis-  
eases of the alimentary canal does,  
viz, Cold, marsh exhalations, food  
difficult of digestion, &c. —

The symptoms are seen in the ab-  
-dometer, distension, flatulency, pulse  
at first weak, and fluttering, but  
as the disease advances it becomes  
more & ~~extremities~~ extremities cold, laborious  
respiration, great restlessness, - This  
is distinguished from the Colic by  
the absence of constipation, and  
from dysentery by the appearance  
of the faces. - The Liver is stimu-  
lated, and a profuse biliary dis-  
charge ensues. - The Bile thrown up  
does not differ from that in other  
diseases, either as it respects its ap-  
pearance or acrimony. -

CURE. First indication remove the  
Causes. - Opiate, in the commoner  
must always check it but if they  
should not resort to the following  
beginning or treatment, -

Chapman gave 20 grs Specacu.<sup>75</sup>  
and facilitate its operation by  
Coffeou, drunks of ammonium, Balsy,  
Sea or Chicken soup. This has the  
tendency to allay irritation, and calm  
the spasmotic strictures. — Bleeding  
is the next remedy; and Chapman  
gave a general rule, that, when  
the pulse is low, in any disease  
where pain exists, bleeding raise,  
~~the~~ the pulse — too much blood must  
not be taken, as the patient's life may  
be destroyed by subtracting too great  
a quantity and thereby incapacitating  
the system to react. — I find the  
use of the Lancee by warm baths  
of great advantage is denied from  
numerous Opinions with rest on  
the Stomach, when Laudanum  
will not. — Warm fomentations  
on the region of the Stomach. —

If vomiting continues, Pin-waters  
and Blister are efficient medicines.  
Blisters, on the stomach and  
if necessary on the extremities, both  
upper and lower. This disease  
in its ordinary shape, is generally  
tractable, but can occur in which  
the complaint runs its course  
in 24 hours. - Dr Chapman saw  
a case produced from eating  
Watermelons at the usual time of  
dinner and the patient's life  
terminated that evening. - Avoid  
cold extremities. - The mildest  
laxative, such as Magnesia  
are to be given. - 8 Bitters of  
Grapica, or Columbarook,  
preferable. We next proceed  
to treat of the formidable  
disease known by the name

77

Cholera Infantum. - This  
is prevalent in the U.S. and  
appears about the period of  
autumn. - Chapman does  
not recollect of having any  
cases lately. Dr. Rush's ~~and~~  
~~definition~~ is thus, "It con-  
- cists of purging, vomiting, in  
Children." - It is unknown called  
male and female dysentery.  
It generally appears in September,  
at the age of 2 years. - The symp-  
- toms are fever, evacuation from  
the Stomach, green, pain very af-  
- flicting, head washes, tenesmus  
of the abdomen, patients sleep  
with their eyes half open. &c. The  
fever is of the remittent kind, and  
exacerbates in the evening. The  
evacuations are large and fetid.

If the disease has progressed so far as the symptoms of too much, few children recover. - The cause, mostly generally, are improper diet, and clothing. - It has been found by dissection, that the Brain, has a morbid appearance, while the abdominal viscera retain their usual shape, cast, or colour. - Dark spots are found in the intestines, and particularly in the duodenum. -

The Liver is enlarged, changed from its natural position, and indurated. - The Gall Bladder is filled with Bile. - The disease is at first a gastric complaint. -

Cure. The first indications must be the removal of the cause or causes producing it; and this end is answered by evacuation. - The most bland purges should be given at

first, such as Castor Oil. If the

first such a Castor Oil, if the irritability of the stomach does not admit of medicines through it; injectious, paracervix an to bung, and then of the anodyne clay.— But if sedations are wished for Chapman gives Calomel, it allays the irritation, and the quantity necessary is so small as not to interrupt that organ.—

Here Chapman's favorite prescription comes in, which is as follows:

Calomel in in 13 grm 3  
Opium in : — 3 grm

every 3 or 4 hours until the irritation has abated so as to an-  
other in Injuries, give 20 grm Ipecac.  
If in this disease the pulse very  
and indicate, any symptoms of

an inflammatory rheumatism, bleeding  
will be demanded, and on this  
point the Physician's skill must  
be his index, as all rests here. I do  
not practise with many Practitioners  
on to give surgery, daily, but  
Chapman condemns them after  
the first or second operation, and un-  
less an accumulation of bile exists.  
Swelling remedies. The following  
is used by Chapman

Gum opium in a m. - 1 grs  
Calomel in a m. - 3 grs  
Spoonful in a m. - 2 grs  
make into 6 pills, give 1 every  
2 or 3 hours. - If great pain at  
first the patient, increase the  
opium. Warm Bath,

Daily, and if necessary 2 a day.

daily and if necessary 2 a day.  
4 B lister, are reported to frequently  
and may be used in almost  
all stages of the disease, on the  
Stomach and Abdomen.

Alkaline, as follows take of  
Greta prep<sup>th</sup> in a 23  
Loaf Sugar in 13  
Laudanum in 15 drs/5  
water in in in 3 oz  
give a spoonful every 2 or 3 hours.  
Another Recipe, to act,  
Plumbort in 10 grs  
Magnesia cal. .. 40 gm  
Tincture opium in 15 drs/5  
Loaf Sugar in 13  
Ct of Aniseed in in 10 drops  
Water in in in 3 oz  
the same dose as above.

Mineral or tranquil, allow in  
dose of 2 grm of powder, or 18 grs. -

The Logwood is recommended by  
some in the City as follows - make  
a strong decoction and give a tea-  
=sleepful every 2 or 3 hours. -

Dr Chapman's recipe make a  
strong infusion of the root of the  
black berry or dew berry, and  
give a spoonfull as usual, every 2 or  
3 hours - 1/3 root to a pint water.

In direction, never take the Breast  
from a child under a year old.  
2 cold baths daily. 3 flannel, and  
yarn stockings. 4 diet like or  
no fruit. - 5 during the period  
of dentition, lance the quins if  
any tumor occurs, or if

it parts painful. 6 This is

it parts painful - & this is  
of the utmost importance, a change  
of air ~~exercise~~<sup>83</sup> moderate. This will  
cure where every other fails. -

Davenport Jan 4<sup>th</sup> Feby 1817 8.

In disease commences with cold  
shivering, Costiveness, sometimes a  
diarrhoea, trowsers, a discharge of  
mucus tinged with blood, Loss of  
appetite, vomiting, pyrexia, either  
remittent or inflammatory. This is  
not contagious unless of a typhoid  
nature being an attendant either in  
the beginning or having assumed that  
appearance during its progress. -

A sudden checked or prostration  
often is a cause. - The Stomach  
is the Throne of this Complaint, Chapt.

~~Cure~~ the first in dieating in effecting a  
cure or to remove irritation, supplant a  
morbid action, reconstitute the healthy, and  
overcome spasmodic affections.—

Cruties in this disease are not altogether  
admissible notwithstanding my great  
partiality for them, Chaperon<sup>44</sup>. — 2 Vene-  
tian. 3 purges mild, as Castor oil,  
in doses now, to give the patient 2 or 3  
in the day:— Mercurial purges, are  
to be suspended in hot weather, as the  
increased position of the system to generate  
heat is great at this time.— Chaperon  
exhibits Calomel alone, in the com-  
mencement of the disease, but sub-  
sequently, Castor oil, or Epsom salts, to  
be given daily until a healthy feces  
are voided.— Chaperon likewise  
is a great advocate for the use of  
opium and has many use-

opium and bear many of  
- prominently, ~~and~~, <sup>and</sup> observes, that his own ex-  
- perience and observation, authorizes  
the free use of opium, and that  
no theory, or argumentation deduction,  
however plausible, can ever entice  
him to abandon his own opinion  
which is founded on fact, the most  
substantial and incontrovertible.

4 Smelling remedies. In the use of  
diaphoretic, we can meet three indi-  
- cations, 1 to open the bouch, 2 the  
skin, and 3 allay irritation, ~~tingling~~  
and for this purpose the following  
Receipt is given by Chapman,  
Opium in a 4 gr.  
Calonel in a 16 gr.  
Ipecac, in a 8 gr make  
8 pills, or powder, give 1 every 3 or 4 hours.  
Auxillary means are to be used such as,

formulations, to the region of the Stomach  
and bowels, externally, of the warm  
bath is advantageous. — The application  
of flannel rolled York lining, is  
suggested by Four of the practitioners.  
Warm, & moist, like warm bath,  
by removing local torpor, & obviating  
irritive fumes, & removing depicted  
affection and languor, & overcome  
dyspnoea, & remove the irritable sensa-  
tion of the patient's belly. — It is peculiarly  
beneficial in old chronic diarrhoeas of  
after life. — Blisters are indispensable  
often, on the abdomen and extremities,  
some harder the extremities as it would  
not inconvenience the necessary calls of  
Nature and calms, but Chamomile  
applies them to the Belly, after de-  
pletive the Bowels and Blood vessels.—  
Keep your eyes on Blisters gratissimus,  
Tortuosa and Terrestris demand  
particular attention at times.

## Receipt,

87

Castor oil	oz	1
Ly. arabic	oz	2
L. Sugar	oz	1
Laudanum,	oz	60
Water of Mint,	oz	2

Give half an ounce or one tablespoonful every 2 or 3 hours. This is the oleaginous mixture. Opium and Senna injected into the Rectum, in the form of a Pill. Diet should be low, as Tapioca, arrow root, Sago, with beverages &c, & many confide in their own abstinence of Sheathing acrimony. —

There is a Typhoid form, which prevails in Ships, Hospitals, or when large crowds are confined. This is to be treated with Mercury so as to induce slight salivation. If the patient be very low, give dilute

Himatang, Cine and soon become  
- mused the P. Bark, but Chaffee  
does not as he thinks, it offensive to  
the Stomach and bodily, partici-  
- pularly when great irritability,  
prevails. Then yet remains another  
form under which this disease ap-  
pears, that of the Otorrhea. This  
requires a very similar treatment  
to what has been proposed in the  
preceding. Chaffeean gives  
Poover's powder, with auxillary  
means at the same time for produc-  
- ing a diaphoresis. - The other  
useful Roller's oil. —

Parrhox. It is a doubt whether  
or not this be a contagious disease.  
It is attended with no fever, or inflam-  
- mation, lessens not severe. —  
Chaffeean divides it into

Idiopathic, and Symptomatic<sup>9</sup>

1 Idiopathic has its seat in the Stomach  
from indigestion, Choked perspiration  
bilement flatulence &c. - First indica-  
tion is to remove the morbid cause.  
If fever supervene, emetics will  
become requisite, succeeded by a  
diaphoretic mixture the top of  
which is Opium. 2 Cam Bark  
re-instate the bowels and its effect  
an much increased by the Spiritu-  
al Balsam. - If the pulse be tense  
or chorded, bleed, copious, &c.

3 I speak 2 or 3 times a day weak  
the following is a good receipt  
Blue bark in in in 30 grm  
I speak in in in in 10 grm  
Opium in in in 5 grm  
make into 10 pills one every 2 or  
3 hours through the day, and 10 Dosen from  
at bed time. -

The patient should drink of the  
Wine Whey tincture at the time of  
taking the dover powder. - The  
Flesh brush may be used at this time.  
Great success has been derived from  
the use of Allum, given as follows:  
Allum in in in 3 grs.  
Opium in in in 1/2 gr.  
3 or 4 times a day, add Sbacet  
if the skin be dry, or touch a little  
with much frays. - ~~Caution~~  
~~Prescription with~~ ~~that~~ ~~area~~  
White vitnot in in in 3 3  
Allum in in in 1 3  
Cochinial in in in 3 grs  
Hot water in in in 1 pint  
dissolve and strain, add more allum  
if you wish the solution more active  
Gumba - The above is to begin in  
doses of a drachm and every  
moment for

night and morning for  
a length of time say 605 days, and  
intermit. This is Morley's Solution.

Dr. Barton ex toled this medi-  
cine, while Chapman declares  
it to be destitute of the virtues ascri-  
ed to it, and no extremely disa-  
gruable that he can not prevail  
on but the fewest number of his  
patients, to make the experiments.

Blister applied to the extre-  
mities was Dr Rush, practitioner.

Amitiate their application by  
applying them to the Abdomen.

The infusion of Gall, has been used  
successfully for the following <sup>use</sup> reason,  
Infusion in m. m. m. 4  $\frac{2}{3}$   
Inj. Chalk m. m. m. 4  $\frac{2}{3}$   
Gaudan m. m. m. m. 1  $\frac{2}{3}$  Give  
a Tablespoonful every 3 or 6 hours. -

Green Tint. given in powder or solution  
or tincture in

Tincture G. Tint

Resin and Chalk in  $\frac{aa}{aa}$  - 4 3

Pandanus in - 1 3

Water in - - - - 4 3

done as usual, Tablespoon, 304 hours

The decoction of Logwood given  
in the quantity of 3 dr. Spoon, 304 hours

Chapman recommends the above  
remedies, but says they are now  
equal to the decoction of buckberry  
root. — Exhibit this as a tincture  
or decoction. — The Mineral  
acid in old contracts diarrhoea  
have been considered with great  
success. — The vegetable acids  
increase the complaint. Of  
the Mineral the Sulphuric

and Nitric acid best, the latter  
given in doses of 10 or 15 drops or  
according to some to 40 drops is  
attended with much benefit. — The  
strictest regimen in diet should  
be adhered to. — The Flannel  
Roller. Mercury should be

repeated to when ~~the~~ the Chyle  
~~of~~ water viscera are discarded. Ex-  
-ercising an hour back & forth  
in great expectation of the bowels  
full of Sulphur and Mag-  
-nesium in equal parts. — Then  
an a band of discs originating  
from the personae of Worms,  
but I shall confirm myself more  
particularly at the Fibris  
terminosa. This is the consequence  
of the Lumbricoids,

It is marked by a voracious appetite, alternating with a lof, fetid breath, in the morning, turgid abdomen in the evening, during the day the child is disposed to pick his nose, head aches, cough and almost uniformly accompanied with febrile symptoms, starting in sleep, &c. The fever is more frequently intermittent, with snatched sleep, and contracted parts.

CURE. Purges of Cal and in doses of 7 or 8 grains to a child 2 years old at night, and if it does not operate by morning give a portion of Castor oil. A second dose of Cal oil may be given on the second day after the exhibition of the first, and manage the case as above directed.

next to calomel Chapman<sup>3</sup>

next to calomel Chapman's  
recommended the Sugilia Man  
landica, (Carolina Pink root)  
in powder or infusion. It may  
be given combined with Calomel  
Sugilia in 8 ℥s  
Calomel in 8 ℥s.  
It has been used in conjunction  
with Erythronia Virginiana.

The noted Prosternon of Mr  
Leavenworth, vermifuge, is as follows,  
Sugilia in 1 oz  
Senna in 1 oz ~~aa~~  
Leaves of Saxifrage a small portion.  
Whiteborow, yesterday, in 5 to 10 ℥s  
according to the age, has been suc-  
cessfully administered. Dr  
Dyott's celebrated Worm powder

was discovered by Dr Pool of this  
City to be composed of 1  
Bell-berry, for today, or on  
Thursday, Mineral.

This requires great attention and is  
attended with some danger.—

Next in order is the Eleocharis Aegyptiaca  
China tree or pride of India.  
The bark of the root is the part used  
in decoction, the dose for an adult  
a tea cupful, and less for a child.  
It is believed by some to be poisonous.

The Chenopodium Anthelminticum  
Jerusalem oak in decoction, a dr  
blessonful morning and night. This  
article is seldom prescribed in con  
sequence of its extremely offensive  
smell. Astrofoca Americana or

Cabbage tree of Jamaica. It may

Cabbage tree of Jamaica. It may  
be given in powder, decoction or in  
bark, but in decoction is preferable  
Pulverized bark in      13  
Water      1 Qua.  
done for an adult 3 Tablespoon  
fulls, in powder & gtt, and in  
extra L 3 p. - For the expulsion  
of Tinea Chapman gave 12  
grains of Barn bog, at a dose  
and repeated every morning  
until it was discharged, which  
was on the 4<sup>th</sup> day. -

Chapman gave from 3 p  
to 3d Spices with  
concoction of a diff  
artery.

10 Feb: 1811

Having finished the second division of the System, and chd  
easy to which they are subject,  
I now proceed to consider the third  
which is the Respiratory organs  
of which I shall introduce with the disease called Cynanche trachealis,  
Angina, or Croup &c. It is  
confined more particularly to the  
ages from 1 to 5 years old in children.  
It attacks children sometimes as young as 1 month, and adults  
but seldom. - The causes are a humid  
atmosphere, cold &c especially in  
the Spring. It is endemic in cer-  
tain places while neighbouring ones  
are free from it. It is <sup>in</sup> all parts  
ravaged by it often  
the complaint, partaking of the nature

99

the complaint partakes of the nature  
of oparsis. - When instantaneous death  
is produced, there are no symptoms,  
less of a disease, but if allowed to  
proceed its footlets are marked by  
traces of inflammation. - Chap-  
man begins the Cure by giving  
emetics, and prefers the antimony  
at short intervals, accompanied  
with warm baths. - If you do not  
succed with this treatment, bleed  
esquisitely and apply a blister on  
the throat. - Chapman often  
bleeds ad deliquium animi,  
and says he has been universally  
unsuccessful in this mode of treatment.  
He gives large doses of Calomel, and  
if it be attended with a cough, hard  
brawns, and dry, tightness of the  
Chest be exhibited.

Polygala Semistar. When the disease  
continues for 10 hours its influence  
is extended to the bronchia. - The  
Cough is increased, more hoarse and dry,  
most anxiety restlessness, and more  
or less fever. - In the still morbid  
= vacuous stage, the Lungs are affected  
circulation impeded, legs white, pupil  
dilated, and respiration laborious.  
A warm bath diligently, and ac-  
-tive purges, or the Sulphate of Tin  
in doses of 20 grs, or Tartar Emetic;  
Blisters little by little lest you debilitate  
the system so as to destroy its  
power of re-action. - Blisters the  
whole Chest, and if it be necessary  
to produce excitation immediately  
apply cloth, dipped in boiling hot  
water, or Cantharides, or hot Sp. t.  
of Turpentine. Calomel now

has a specific action, and should

101

has a specific action, and should  
be given in large quantities. As much  
as 33 has been administered to adults  
18 months old, in the course of 18 to  
24 hours. — It was believed at one  
time in England that the Sulphur  
sulphuris was a certain cure, but  
the opinion has been abandoned,  
and Chapman says that such a  
treatment here would kill as quick  
or as soon as a bullet shot through  
the head. —

Catarrh 19 Feb: 1811

I am informed by Dr Mu-  
-cus from the Mouth and  
Nose attended with morbid  
fever. — It originally from the  
Changings of the Temperature  
of the Atmosphere, cold and wet  
winters. The Mucus frequently

excoriating the parts - The symptoms  
are, dry difficult respiration, pain  
in the head, hoarseness, ~~shudder~~ of  
the Trachea, structure of the breast,  
dry rattling Cough, &c -

The disease subsides if not ill  
treated. Great attention ought  
to be paid to persons with weak  
Chests, and old. Croup is the  
result often from this complaint.  
The pulmonary consumption  
not unfrequently is the con-  
sequence. Cure. In incipi-  
ent Catarrh, the most effectual rem-  
edy is a large dose of Laudanum  
at bed time Opopanax and  
Chamomile - If, in consequence  
of any circumstances, sputum  
should be expectorated, the best remed-  
y must be to the Pediluvium<sup>105</sup>

must be to the Pediluvium<sup>103</sup>  
Spiritus slinderd with warm  
buraqgo - Bleeding is sometimes  
required, Chapu hitmud a case  
when  $100\frac{2}{3}$  blood was drawn.  
Purges of neutral Salty com  
bloud with a small portion of  
Tartar Emetic. A Recip for  
Opson Salt m. - . . . . " 13  
Blisters m. - . . . . . " 20  
Tart. Emetic . . . . . - If you  
divide into 4 doses give one every  
hour until they produce an eva  
uation. - In this Country  
these diseasey partake more  
of an inflammatory nature  
which render it fit to extract  
it at first before pain super  
venes. - Blisters are serviceable  
and sometimes of the first im  
portance.

Never apply them too early, but  
in the last stage, when pain  
exists. - When Coughing is troublesome  
the following are good receipts:-  
Extract Iguanica - - - - 2 3  
S. S. S. Nitro - - - - 2 3 3  
Laudanum in a 40 quoth  
Antimonial Wine in 1 3  
Warm Water in a 3 3  
down a table spoonful every hour.

Another

Original Iguanica - - - - 1 3  
Antimonial Wine in 1 3  
Nitro in - - - - 2 3  
Laudanum in a 40 quoth  
Water in warm 3 3  
Give as before Another  
Sulph Tartar in - - - - 2 3  
Am. Wine in - - - - 1 3  
Laudanum - - - - 10. quoth

Compound S. S. Lavender 2 3

Compound Tincture of Lavender 23

Water warm or - 3  $\frac{2}{3}$

as before, 1 Tablespoonful, hour.

In this disease the strictest regimen in diet is required, vegetable food only to be used. Recipe

The vegetable Broth, incatoo.

Turnips, carrots, parsnips 2

Potatoes 2

Onions, small 2

Water warm or - 1 Gallon

boil 2 hours, strain, and add  
a little salt. - A small quantity  
of Sal ammoniac may be an ingredient.

Influenza. This disease resembles the preceding, with this difference, The cause of Catarrh is known, of this however we know  
This is divided by some authors  
into many species, best Chapt.

~~vora; and noth-~~  
duration is into, ~~Pneumonia~~, inflam-  
- nation - - . The symptoms  
are typhus, dry cough, pain in  
the side, or breast - It commences  
with cold tremor, respiration lab-  
- orious, &c. The matter expe-  
- licated is tinged with blood.  
It more generally attacks persons  
of robust habits, and prevails  
in Winter, and Spring.

Cure. Bleed copiously with  
large orifice, - In the South  
when the complaint is frequent  
and symptoms high, take 30  
ounces of blood, and repeat it  
necessarly. - Bleed until the  
skin tenses, and breathing  
facilitated, whether 15 or 50  
oz Chapman's Seal remedies  
blister, postpone until the

107  
systole is reduced. - Bleeding

107

System is reduced. Bleeding  
Pustules, Cysts, &c. - Copious evac-  
uations are not called for in this  
complaint. - Sweating produces  
either good or harm. For the  
purpose of inducing diaphoresis,  
the Asclepias decomposita, with  
Ipecac. - The common antimonial  
powder is preferable with some  
practitioners. - After the cough  
with expectoration has begun  
give demulcent drink, —

Pellagra, phlegm, Known by head  
ache, red eyes, turned countenance,  
vomiting dark matter, with a  
fetid odour. - Bleed until the  
system is depurated, which will  
be accomplished by a bleeding.  
Mercurial purg., and after-  
wards an infusion of  
Virginia. —

Pneumonia Notha. The symptoms  
are similar to those exhibited in  
the preceding disease. — The attack  
is sudden, respiration laborious,  
an accumulation of mucus,  
and phlegm on the lungs.—

Cure. Bleed sparingly. Emulsiy  
of Sulphate of Sodium, or Glycerine.  
Blister to cover the Chest afterwards.  
Opium may be used liberally, in  
all stages of this disease, contra-  
ry to the treatment of other pul-  
monary complaints. — Blow it  
in ~~opercular~~ but combined with  
a purgative article, better.—

A disease called Aprophyly  
of the Lungs, requires sudden  
bleeding, and afterwards, give  
a large dose of opium.—  
Apply a Blister on the chest

Portusci Skin Cough or Nostrils. —

~~Portugy, Chincough, or Whooping~~<sup>Cough</sup>

This disease is communicated by adhesive contagion. - It has according to some, in the air vessels of the lungs, some suppose to be in the Larynx, some in the alveolar cavity, and by others it is thought a spasmodic affection.

Disease of Glasgow, appears to be an inflammatory complaint, situated in the mucous membrane of the Nose, Trachea, and Bronchia. - It frequently leaves the parts, and descends into the lungs and forms tubercles. - Two indications present themselves, - It is to overcome the inflammatory disease, which is to be done, by soon Bleeding, which facilitates Respiration likewise.

a active tractrix, then act by dete-  
rmining to the surface and in-  
terrupting the morbid train of apo-  
sepsis, suppuration. - Specad. with  
white ointment, not only act as an  
astringent but as an antiseptic modis.  
Reflux, in the beginning of the dis-  
ease, 2 in 24 hours is necessary &  
nauseating dose, of Antimonials  
wine, Specad. wine, or Oxygall  
equally. - Purges of Rheu, Magnuni-  
or Castor oil, Should be used as they  
are mild. - Calomel, this  
breaks the course, and is the most  
proper purge. - Local remedies  
are demanded to obviate the con-  
gestion of the lungs, and the best  
of them is inevitably a large  
Blistery

The second stage of Persepsis. -

The second stage of Perpetuation.—  
Opium is required to call a irritation  
and quiet the cough—Coccula,  
Thlaspias, Atropa Belladonna, &  
the Datura Stramonium, have been  
resorted to, and Chapman conjecturing  
the latter article would be beneficial  
Cathor, and Musk are used  
by many authors, but Cullen con-  
demns them and Chapman dis-  
penses to doubt their efficacy—  
Chapman prefers the Musk  
contrary to Cullen, particularly  
in Syphillis—It may be given in  
the Musk Tulep, but Children  
have a great aversion to it in this  
form, and it may be and as an  
Elixir—The artificial Musk is  
composed of Strene acid and Amber.

Chapman used together with me  
my other practitioners of this City  
use it as an Emulsion, and give  
from 10 to 12 grains to an adult, and  
from 1 to 5 drops to a child 12 or 18  
months old. A Solution of Asa  
foetida, as follow:

Gum Asafoetida ..... 23  
Water ..... 8 oz  
dissolve a Table spoonful. as usual.  
P. Bark. - Annie. - Saccharum  
Saturia. Nitrate of Silver.  
The alkalies have proved very  
great success, as follows:  
Carbonate of Soda ..... 3 grs  
Ipucac. Wine ..... 5 drs  
Laudanum ..... 1 drs  
Water ..... 13  
very strong to a child 12 months  
old.

an other

Carbonate of Potash ..... 10

Carbonate of Potash m m m . 1 ②  
Cochinchinal m m m m . 10 9<sup>th</sup>  
Water m m m m m . 5 3

Swallow the mixture and give a tea spoonful 4 or 5 times a day to a child.

The Potash or Soda combined with P. Bark, is serviceable in this complaint, and particularly in Intermittents as already mentioned.  
Pincture of Can Tharidez, a few drops with Sugar and water. Strangury often suspends this disease, and is reported to frequently.— Chapman's practice may be summed up in a few words. In the first stage which is inflammation, Blue Mercurial purge, and if a great accumulation of Phlegm exist give Emetics and Repeals, likewise narrative doses of Sassafras or C. Fructus

should be exhibited during the  
intervals of the Eruption. - Blisters  
palliate with Opium or Cough.  
In the inflammatory Stage the  
watery Solution of Azafotica,  
and alcali. Great attention  
must be paid to the diet, which ought  
to consist of vegetable matter entirely.  
Clothing warmer than usual, but  
not the an ex eqz. Preserve an  
equal Temperature of the room.

Having finished the disease of the <sup>115</sup>  
respiratory system, I now proceed  
to treat of the Absorbents <sup>of</sup> Septum.

The first is, Anasarca, together  
with Hæmorrhoids, and As  
Cites.

Dropsy is an accumulation  
of water in any part of the  
system, either partial or universal  
in a greater quantity than nat-  
ural. - It is the consequence either  
of an increased action, or a debil-  
itated action in the absorbents.

Cure, depends on the action of  
the Lymphatic, being round.  
It is attended with fever, and  
other inflammatory infections.  
There are 2 indications in the  
Cure, & to evacuate the serous  
fluid, and to change the con-  
dition of the Septum. - I will  
first mention the treatment of

of those cases attended with fever.  
Reduce the system by Bleeding.  
The pulse is hard, and chorded,  
Skin dry and hot, tongue parched  
H. - Auxiliary to Bleeding are  
vacuating remedies, such as, Emetics,  
which cause absorption of the  
effused fluid, and relieve the Stomach  
each when prescribed. Purges  
overcome Constipation, which exists  
in the commencement of the disease.  
They should be given every  
day if the patient will admit  
them, but some time is necessary  
in their exhibition. - Practitioners  
have been used, but Chapman  
does not advise me up an old  
chronic case of long standing.  
Chapman gives the following  
receipt as an emetic purge.

receipt or an excess purge.

Cream Tartar - - 200 gr 3  
Salap - - - - 100 or 15 grs  
every 3 or 4 hours. - Chapman has  
known a tumefied abdomen  
depressed by this prescription. -

It induces an artificial chi-  
-arthora. - During, the best  
of which is the above prescription.  
Dissolve the Tartar in a small por-  
tion of water, or as an electuary,  
which is a good Mydroagogue,  
and by far the most advantagous  
manner of exhibition. - The  
alkalies, of than the Potash is  
prefered, particularly in bad di-  
gestion, and drunkards. - On  
dressing of high action the Nitrate  
of Potash. <sup>good</sup> In large doses it dis-  
turbs the stomach, and which  
cannot be given the Sassafras tincture  
is preferable particularly w. Chilaz.

Physicians do not give this article  
in a sufficient quantity to derive any  
benefit, and consequently prescribe it to  
be anodyne of little importance.  
Chapman says it should be given from  
4 or 5 to 3 pp 3 times in 24 hours.  
A spoonful is a good dose. Next to  
this Parsley is recommended, grown  
in strong Tea. In inflammatory  
cases we employ drastic purges,  
Calomel, with Gamboge, Galap., or  
Elatomium. Chapman has used the  
Digitalis in all stages with benefit,  
but in a fable exhausted system  
it acts most kindly. Incap-  
able of high action it is prejudicial,  
when the pulse is fable, extremely  
cold, countenance pallid, this is very  
efficacious. Darrow gave it in  
all cases of intemperance, and in  
-ular, prolocuring this disease.

In our case -

119  
The best method of quenching powder. Tobacco is much al- lied to Digitalis, but Chapman does not recollect of cardenizing any advantage from its use.

The Squill an useful male species of Drapery, but requires skill. - Chapman's recipe  
Squill, — — — — — 1 gr  
Calomel — — — — — 1 gr

3 times a day. - Cullen Combinus Squill with Sptre, it is not entitled to any notice. - When called to Chronic Case, active ~~force~~, diuretics are required. Cantharide ex cito, drawing wry, when given in small doses, but in doses of one or two drachms, infrequently in the day, pro- duces a copious discharge of urine. - Purities cannot be em- ployed in ale cases. - Daphne with an of service, when the

pulse is thin and Choroid, extreme  
other cold, Skin dry with other  
marks of debility. - Capsicum, Bals,  
Iucca, combined with Opium,  
an emetic and Opium has frequent  
by blow up and down. - Poessy powder  
has proved beneficial. - Plaster,  
Mikroskop. In many cases the  
parts are denuded from long con-  
tinuous rubbing bed, in such instan-  
ces Chapman says the Roller  
is of immenso importance in  
resting the prograp of mor-  
tification. - Of Ascites

This is a disease in which the ef-  
fused fluid is contained between  
in the Sack of the Peritoneum.  
The Swelling is confined more  
especially to the Hypogastric  
region, there may be a certain  
by pressing the hand on the

by pressing the hands on the <sup>121</sup>  
part, and thereby producing flex-  
ion - The cause, producing  
it is the same with Anakas-  
Ka. - Flatulence is almost an  
uniform attendant on this disease  
and a certain proportion of  
Arsite. - Chapman's theory of mer-  
cury inordinate degree of flatulen-  
cy, is, that a gas is extrica-  
ted, and is converted into a fluid.  
As this complaint is of few the  
consequent of a disease, <sup>of</sup>  
Mercury is demanded. One  
of the methods for evacuating  
the fluid is Aspirin, and is  
a safe one provided the effused  
contents, are not drawn off too  
readily removing the stimulus  
of distension, which was so great  
as to keep up vital functions -

Encysted Drophy is contained  
between the Skin and Parieties of  
the Abdomen. - The symptoms  
are local swelling, an inclination  
of the water to one side or part, and  
the absence of Fever. - Menstrua-  
tion is not interrupted in this spe-  
cies, as in others. - The use of  
Muscary is called for. - Topical  
remedies. - I now proceed to speak  
of Hydrocephalus the most dan-  
gerous form of Drophy. - It most  
is either in the Pericardium, Bron-  
chus or cavity of the Chest. - It is  
difficult to ascertain its situation  
at all times. - The symptoms when  
in the chest, are laborious respiration,  
and on moving it increases; partic-  
ularly in ascending stairs &c. The  
patient cannot keep a horizontal  
position on account of great dis-  
comfort.

Frequent cough, and sometimes

- 123 -

position or an uneasy dryness  
frequent cough, and sometimes  
attended with an expectoration  
of mucus. - Culver says that  
this complaint scarcely admits  
of being cured. Chapman does  
not acquiesce in this belief, however.  
When it is a state of inflammation  
- torily symptomatic. Blood. Cure  
Blood, as just mentioned, under  
certain circumstances, for example,  
- edia, are infusorily demanded  
- ed. - After bleeding, topical  
means, Blister the system alter-  
- nately, first on one part and  
remove to another. Diu-  
- nities. Digitalis, and <sup>with Coloph.</sup> Quilly,  
the latter soon an shoot up  
is as sure to affect a cure as  
the P. Bark in Intermittent.  
Chapman advises a gentle sal

ivation mixed with Mercury  
combined with Squill, -

Purges in this complaint, are  
not only unfez, but increase the  
symptoms, & circumstances not  
yet accounted for.

~~I used to treat of the diseases  
of the Digestive organs.~~

Calculus, or Stone, is a complaint  
to which we are frequently called,  
and although, we are compelled  
to confess our incompetency, in effect  
ing a radical cure with medi-  
cines, yet we are able to palliate  
the symptoms, and propably arrest  
the vicinage of the Calculus. Of  
the remedies, mostly recommended  
for this purpose, the Carbonic acid,  
Soda and Potash, are the fittest

25

All Bitterns have a tendency to  
destroy gravel such as Quarry,  
Columbo, Carmoona, Gentian &  
Cullen thought they absorbed the  
acid in the stomach, and thereby  
prevented the generation of the  
stone, which enters into the composition  
of Uromy Calcoli.

Chapman prefers the Wood At-  
rsis, and says if it does not disolve  
the stone, it mitigates pain, ~~and~~  
allays many symptoms, and  
irritation.—It produces a large  
urinary discharge, which is a  
fact much to be looked for.—The  
infusion of Hop-chapman thinks  
would prove efficacious.—The

Daucus Carota, or Common Car-  
rot, has been used with advantage  
in a strong infusion.—

*Allium Sativum, Garlic*, is recom  
mended by some Authors, but it  
should never be given, unless inflam  
mation exists. — *Magnesia* has  
usually been used with great success  
by Dr. Brown who does not rely  
on any medicine or a Lotion, &c.  
He states 4 Cases attended with Conv  
by Magnesia 1<sup>st</sup> Case 16 gr. were  
given 3 times a day before it effected  
a cure. 2<sup>nd</sup> Case 20 gr. with Liver and  
Tarter, — 3<sup>rd</sup> Case 20 gr. every night cured  
speedily. — 4<sup>th</sup> Case Alkalies were given  
for a length of time, without any  
other ab. benefit, afterwards 20 gr.  
Magnesia were given as before, which  
cured in 8 weeks. — In all of these  
Cases a deposition of Sandy matter  
was to be found in the Urine. —  
The Stools commonly consist of  
Phosphate of Ammonia, and

*Magnesia* and sometimes a

Phosphate of Ammonia, and

Magnesia, and sometimes a  
Phosphate, of Lime. Chapman  
says, Magnesia will not act on  
either of those substances, and if  
any good does result from the  
exhibition of Magnesia, the  
Modes Operandi is unknown.

It is necessary to be acquainted  
with the manner of treating this  
complaint in the paroxysm. The  
first indication is bleeding copiously,  
to destroy inflammatory synap-  
tism, and afterward to relieve  
pain, which is to be done by Opium  
and the best method is in injection  
in doses of from 200 to 300 hundred  
drops. Warm Bath at the tem-  
perature of 98 or 100 degrees F.

I now proceed to the diseases of the  
organs of Generation, and first

Menses, which may be  
considered a <sup>healthy</sup> physical function, but  
often a disease. - The fluid discharged  
is peculiar secretion, not contain-  
ing red globules as in the Blood of the  
system. - Chapman taught the above  
doctrine, but says, since that time,  
he has paid considerable attention  
to the subject, and has found pure  
and coagulable blood. - Hemorrhage  
- rhagia may occur in either an  
impregnated or unimpregnated state  
of the Uterus. - If in either, as true  
feats are to be used, cool room, rest,  
purges, bleeding under certain cir-  
cumstances. - If the pulse be high  
and strobbed, pain, blood frenzy. - The  
purges should consist of Saffron and  
ice. - In Uterine Hemorrhage,  
Chapman bleed freely in all cases,  
and gives what he <sup>has</sup> called a specific  
Sackarum Saturatum, but Chap-

This gives what has <sup>been</sup> called a Specie  
of Acetamin Saturat, but Chapman  
does not go so far. The usual method  
of extraction is, as follows,  
Take Saturat <sup>900</sup> or 3 gr.  
Opium <sup>100</sup> or  $\frac{1}{2}$  gr.  
Snakeskin and ginseng, and if  
this does not suffice give another  
of the same prescription and so on  
until the humor <sup>has</sup> stopped.  
Chapman has given as much as  
40 or 50 gr. in 24 hours. He gave  
15 gr. at a dose in a case of Hemop-  
-tysis. Dr Bush had a patient to  
take 13 without any inconvenience.  
Ipecacuan <sup>is</sup> neutralizing doses, if it  
promotes vomiting the symptoms  
will increase. It may be given 6 or 7  
Ipecacuan <sup>10 or 20</sup> gr.  
Opium <sup>10 or 20</sup> gr.  
Allum was used by Paracelsus  
with much success. It may

be combined with	Opium or	followed
Albumin	-	10 <sup>gr</sup>
Klein	-	as 10 <sup>gr</sup>
Catopsean combining Opium with		
Albumin, say		
Albumin	-	10 <sup>gr</sup>
Opium	-	1/2 <sup>gr</sup>

Elixir of nitrolo in doses of from 20 to 30 drams. In many cases where blood letting was indicated Authors have prescribed Digitalis purpurea, but Chapman contends that there is no substitute for the Lancet, in a high action pulse. - Chapman thinks it might be used after operation, but even at that time requires much expence and skill. - He never has used it, and never will. - It is the practice in Europe to give Opium, but Chapman thinks it productive

6 wrote to give Opium, but

Chapman, think it productive  
of much harm, - only under very  
peculiar circumstances, and then  
judiciously employed. - I am  
equally to be satisfied Opium is good  
Blisters are necessary sometimes, and  
should be applied on the back and  
side. They have an identity of ef-  
fect with Opium. - Cold ap-  
plications, on the Pudenda, when  
other remedies, do not succeed.

Chapman's Question in all chronic  
cases of females, Are you regular  
in your menstruation? In Dose  
menorrhoea bleed, diaforetic, or  
Opium and Opium, Warm Bath,  
98 or 100 degrees Fahr. Extract  
Hemlock, and Datura stramonium.  
The Female Confinement operates with  
great facility and promptness on  
the Uterus, and should be given in

dose of 1<sup>3</sup> 20 grs, every 3 or 4 hours -  
The most effectual remedy in my  
hands was Camphor, and Opium Oil.  
Camphor in — — — 8 to 10 grs.  
Opium in — — — 1 to 2 grs.

If this has not the desired effect in  
the course of 2 hours give another.

In extreme cases, Salivate and  
Blister. — Warm cloths, and other  
auxiliary means are to be used.

Anunworthow, is divided into Pe-  
tition, and Suspension property,  
called anunworthowas. — The first  
remedy I shall speak of is the  
Poly of gla seruka, first used by  
Dr. Hawthorne of this city. — It is  
used in powder, and decoction, and  
Chapman prefers the latter method,  
or you can more conveniently  
combine an aromatic if necessary.

It is to give in a large dose, as the

It is to give in as large dose, as the patient stomach will bear, for 2 weeks before during the interruption of the expected menstruation.

In two cases a Precidua is formed which entirely obstructs the discharge and must be removed by active medicine. How such a membrane is produced is unaccountable.

Dodin in doses of 10 or 15 grs. were used half a century ago, by Dr. Stone, 3 or 4 times a day. - Boston gave madder. - Chapman giving a strong infusion of Rosemary in doses of a Tumblerful for 3 or 4 nights previous to the expected period of menstruation. - Chapman has given the Phosphorus in doses of 10 or 12 grs. with Olive Oil, and finds it well adopted to weak and emaciated patients.

Tourist, can hardly be considered  
Emanuagogue, the term applied  
to the above named medicine. -

If this clog Iron alone, or used  
in conjunction with exercise, cold  
bath, and change of air. - The  
Carbonate of Iron is the best cha-  
lybate, and may be given as follow,  
in doses of 10 or 15 grs alone, or say,

Carbonate Iron  $\frac{1}{2}$  oz.  $\frac{1}{2}$  grs. 23  
P. Bark  $\frac{1}{2}$  oz. 13  
Ginger  $\frac{1}{2}$  oz. 23  
make for 8 Bolus, and take  
3 or 4 a day. - Chalybatic  
Wine is made as follows -

Rubigo Ferri  $\frac{1}{2}$  oz. 1 $\frac{1}{2}$  3  
Gentian  $\frac{1}{2}$  oz. -

Orange Peel  $\frac{1}{2}$  oz. 23

Port Wine  $\frac{1}{2}$  pt. 1 quart

When this disease is attended  
with pain, redness, and other

When this disease is attended  
with pain, redness, and other  
inflammatory signs, the anti-  
septic treatment is demanded.  
<sup>135.</sup>

Purges of Aloes, Myroth &c are  
to be prepared. The salts of Tartar,  
Sulphate of Iron.

Hops	—	—	—	—	1/2	3
Myroth	—	—	—	—	1/2	3

make a mass and divide it into  
the moderate sized pills, and give  
2 or 3 every night. — The Black  
Willow is preferred by Dr. Phys-  
ick and others, in doses of  
8 or 10 gr. — The dose of the Tonic  
is 25 or 30 drachms. —

Of the Venereal disease. —

Chapman forbear to say any  
thing on the disease particularly  
but observes that, Gonorrhoea &

Syphilis is thought by some, to  
be an idiosyncrasy of Complaints,  
while he considers, for the existence  
of no marked difference.

Cure. Mercury, in the first  
stage - Infection, for which  
are the following receipts

White Vitriol	-	-	10 grs
Sugar Lead	-	-	12 grs
Laudanum	-	-	13
G. arabic	-	-	-23
Water	-	-	8 oz

Mild diluent drinks are to  
be used, especially when pain,  
and inflammation exist.

In Cases of Chorda, aborti-  
ne - the following is a good injection

Chloro	-	-	10 grs
Camphor	-	-	20 grs
Hot water	-	-	8 oz

Make into solution and strain.

Hot Water 8 3  
Pour into solution and strain. 137

Saturny laboring under this disease, are to be restricted from rich food, and rest enjoined.

Chasman giving the following Rx

B. Cophera	—	1/2 oz
C. Spt. Lavender	—	—
Dulc. Spt. Veta	—	2 3
Laudanum	—	1 3
G. arabie	—	2 3
Water	—	3 3

give a tablet, soon full every 2 or 3 hours = Resin is used in doses of 8 or 10 grs 2 or 3 times a day.

Voa Voi given as in Grand, 20 or 30 grs 3 or 4 times a day, or this has been used as follows:

G. Hiu	—	2 3
Allium	—	1 3
Opium	—	10 grs

water	8 03
dipolar and Strain - The following is a good injection -	8 03
Sulphate Copper	15 fls
Spiraea	20 fls
Hot water	8 03
dipolar and Strain -	8 03
Another -	
Corrosive Sublimate	2 3
Sal ammoniac	10 fls
Water	8 03

In Syphilis, when ulcerous, they are to be washed with a solution of Corrosive Sublimate, say  
 Corro. Sub. 1 gr  
 Water 10 03  
 The Corro. Sub. Laver alone, as diluted, is an excellent lotion  
 likewise. As has before been observed  
 Morever, it is to be used in the  
 first stages of Syphilis, washing  
 twice a day, strictly and gradually.

first Stage of Syphilis, so as to induce a very slight and gradual <sup>139</sup> Salivation. — Chapman says there are many venereal diseases that does not begin mucously, but even with can be cured by other means. From the first appearance of Chancre until the system becomes contaminated, is from 15 to 20 days or even months. — Chapman says that Bubo is a sympathetic swelling from Chancre, and that Chancre is to be destroyed as soon as possible, in order to prevent the system of Glanders. — This object is to be effected with Caustics. Much more depends on good dressing for success in this complaint than is generally thought. The action of the Utral Penitentiary tube Properly must be obviated by binding the Penitentiary back with a soft Corset.

All ulcers on the Genital organs,  
whether male or female, find upon the  
parts to take in a placid, relaxed  
habit, and under such circumstances  
as, Phagedenia Mercarto con-  
sequence. — A strong Lotion  
is necessary under such appearance.

A generous diet, and rest are also  
essentials, respecting a change of the  
complaint, when the system is torpid  
and depressed. — Mercury,  
does not win its good effects in the  
course of 2 or 3 months, suspended, or  
or even entirely be given it. — The  
Nit. acid Chapman recommends  
and says thle he has used it, with  
much benefit, when given in the  
quantity of 2 3 daily. — This  
is peculiarly good for Phagedenia  
ulcers, as a wash. — It is necessary  
to dilute the acid. — It is used  
equally for curing the genita-

mercury, & rhubarb

incorrigible chronic  
Lichen.
